

**Marshall & McCourt**

INTELLIGENT, GREEN LIVING

# Our Vision

*A green and smarter way to live*

*“All of our renewable energy options are designed to meet the needs of customers today without compromising the needs of future generations.”*

Marshall & McCourt have been helping homeowners and businesses with their heating and plumbing requirements since 2008. We're now on a mission to help them live a smarter, more sustainable lifestyle.

With headlines about the effects of climate change increasing almost as quickly as heating bills, interest in renewable energy options to reduce the reliance on non-sustainable, damaging fossil fuels has never been higher.

Through customer research and product development, we identified the need for a bespoke series of products that are cost-effective, energy efficient and, above all, easy to integrate into everyday life.

**We live in an amazing time for innovation! The technology exists for homeowners and businesses to not only reduce their energy bills but also generate extra income through smarter living; saving them time, money and hassle.**

“From day one our company has always been passionate about helping people to enjoy the comforts of their home in the most productive and efficient way possible. We achieve this by offering professional, impartial advice to determine the most suitable solution for their homes and lifestyle.”

Welcome to Intelligent, Green Living

# Where smart meets sustainable

From flooring that feels like you never left the cosiness of your bed on a morning, to solar panels that don't mind a cloudy day and heating solutions that can generate energy literally out of thin air - we are designing and building homes to be as green, smart and sustainable as possible.

Developments in low carbon technologies mean it has never been easier to convert natural energy, harvested from sunlight, air and the ground, into intelligent, cost-effective systems. This not only transforms your way of living, but also provides additional income from Government incentives and fuel savings.

New technology has now given us more ways than ever to ensure that you have complete control over your heating, lighting, entertainment and security.

- Our solutions are designed around your individual needs and can be used in every home, regardless of age
- We have teamed with leading brands and experts in the field to provide systems that deliver across a range of budgets without compromising on quality
- Mixing new technology with ecologically sound products provides a winning combination

All of this innovation is backed up by Marshall and McCourt's outstanding personalised consultations, dedicated and highly-trained workforce and unrivalled customer service.

*By investing in a more intelligent, green living solution not only do you have the comfort and convenience of a living space that understands and adapts to your needs, but you can rest assured it is helping contribute to a better future for the next generation to enjoy.*

# Create warmth out of thin air

If it seems like your money is disappearing into thin air when you receive your monthly heating bill, turn the tables and create energy from the air or ground all around you. Our innovative heat pumps are designed to provide a sustainable source of energy to meet all your heating and hot water requirements.

With heating and hot water accounting for almost three quarters of the total energy used in UK homes, there are obvious savings from being able to reduce consumption in this area. Our systems are also designed to help meet the Government's commitment to reducing CO2 emissions by 2050 and greenhouse gas emissions by 2020.

Our experienced and qualified team of renewable experts will talk you through the best solution for you and your home.

**The benefits of your investment will include:**

- Improved and reduced energy consumption
- 5% reduced VAT rate
- Renewable Heat Incentive (RHI) Government funding available
- Low noise levels
- No carbon monoxide risk
- Longer lifespan than a traditional fossil-fuel system

*“Our innovative heat pumps are designed to provide a sustainable source of energy to meet all your heating and hot water requirements.”*

## Solar Panels

# Harness the power of the sun

Solar technology has advanced greatly during the past ten years and whilst there may not be as many bright and sunny days as we'd like in the UK, rest assured, solar panels can still work on cloudy days. Proven to generate a large portion of the average household's annual hot water and electricity consumption, solar energy also combines effectively with heat pump technology.

Our solar solution captures the energy of the sun and converts the light to create electricity and hot water. As well as cutting costs and creating a green, clean and renewable energy source, surplus electricity can even be sold back to the grid to generate additional income.

Furthermore, integrating battery storage into your system will enable you to store energy harvested during the day, available for use even when the sun goes down.

## Underfloor Heating

# Keep cosy from head to toe!

We've all been there – waking up first thing on a cold winter's morning knowing your feet will have to make contact with the cold floor, and all of the luxurious, cosy warmth you're currently enjoying will be gone in an instant.

Even with radiators timed to wake-up before you do, heat rises meaning, no matter what floor covering you have, it will always be the coldest part of any room.

**The solution?** Save valuable wall space and bring the heat down a level with a cost-effective, compact and eco-friendly solution, designed to spread warmth more effectively across your whole home.

Our water-based solution will help to spread heat across your entire home from the ground up, wrapping you in a blanket of warmth, at a temperature that can be set with the touch of a button.

*"So now a sunny day can not only be a great excuse for exploring, taking a trip or having fun with friends and family – it can be helping to create a more sustainable and profitable future too!"*

*"Underfloor heating is also quieter than many alternative radiator systems and offers a greener sustainable solution and can be perfectly integrated with heat pump technology."*

# Introducing Smarter Living Solutions

Meet the new brains of the family!

Imagine a home that interacts with you - first to rise, last to sleep and always on alert to your every need. A house where you can not only turn the lights on and off from wherever you are, but also determine the mood, colour palette and brightness of them too!

However, smart technology is not simply just about turning lights on and off with your phone. With our fully integrated solution, smart technology takes care of tasks around your home automatically, freeing up your time for the more important things in life. From lighting and climate control to security, blinds, music and energy management, your whole home can be intelligently automated.

Our fully integrated solution can include: multi-zone heating – make the living room warmer while the bedroom stays refreshingly cool, each room can be adjusted to offer maximum comfort. Lighting – from ambiance to duration, our technology will learn what you like and when for each room in your home.

#### Multi-room audio

Play different music in every room or have your favourite song follow you as you move around your home, no more turning up speakers or travelling with mobile devices.

#### Blinds and shading

No more throwing back the curtains to blinding sunlight or forgetting to close the blinds on an evening, instead a shading system that opens and closes automatically, filtering the light to suit your needs.

#### Energy

From consumption to production, everything can be monitored and controlled, ensuring your green and sustainable systems are as intelligent as they are eco-friendly.

#### Alarms and security

Be alerted to any dangers in your home, even when you're not there; our system handles everything from strangers approaching the property to fire and flood risks inside.

*“With the average family completing almost 50,000 different actions in their home a year; everything from locking doors to turning off lights, the benefits of a one-stop solution will quickly start to show.”*

With tailor-made solutions to benefit properties of any shape and size, we would love to show you how our smart technology can integrate with your home and everyday life!
